*“The combination of the strong physical expression of the work – owing to the amount of material used together with its chromatic resonance, results in these pieces transcending its physical boundaries, thus expanding them visually.*

*In the case of large formats, the painting takes in the air that surrounds it and envelopes the viewer. This effect is the inspiration for Reguera to physically expand some of his works, to paint the aura of the painting, to make it physical, to create ‘expanding paintings’.”* Museo Esteban Vicente
